

Keep the Heat activities.

Talk together about the places where heat may be escaping from homes or other buildings like your group's community building. What strategies can you think of to 'keep the heat'?

Here are 4 activities that you can do at home or prepare with your youth group in order to make those savings. The Draughty Dog is of course another idea!

Make foil wrapped cardboard reflector panels to slip behind radiators. These reflect heat back into the room and reduce the amount of heat that is lost into wall, particularly exterior walls.

Stick at
3 for a
Happy
TRV!

Make stickers to attach to TRV's. Setting TRV's to 3 is the most efficient. Make 20 of these each and then with permission...stick some on radiators around your home, school, community building or in the homes of your neighbours and families.

Make curtains thicker! Tack or tape sections of spare fabric to the back of curtains. This provides excellent extra insulation.

Find out about Chimney Sheep and Chimney Balloons aimed at reducing energy being lost up the chimney.
